

PRESS RELEASE

The most scalable and featured network monitoring software, delivered at a low cost subscription.

Sydney, Australia – August 2015 – AKIPS Network Monitoring Software – Latest Release 15.24

AKIPS continues to innovate with today's latest (build 15.24) software release incorporating an operating system upgrade. Paul Koch, CEO of AKIPS says "it's all about staying ahead of legacy competitors and maintaining AKIPS vigilance to address the latest FreeBSD operating system security advisory notices, so customers can ensure their network is running smoothly".

AKIPS have a weekly build release cycle with the latest innovations including items such as:

- Geolocation – Added this option to the Netflow Reporter. Selecting this option will display the country code and its full name of origin.
- Alerting – Allowing users to set up email alerts that also include the value that triggered the threshold.

Nick Frampton, CTO of AKIPS, says "of all the features we add to each build, alerting is the one that users love the most as they can set up unique thresholds and have emails targeted to work groups or specific individuals to address those alerts. Our customers rave about this real time alerting."

AKIPS have also released the draft of their Programming API documentation and plan to update this regularly, along with the future release of the user manual which presently covers the ease of use of the backup and restore abilities of the software.

AKIPS continues to lead the market as the only network monitoring system to monitor SNMP, Ping, Syslog, Traps and Netflow, all at one low subscription price, independent of the size of your network.

Visit akips.com and you will have it installed in 10 minutes on your enterprise network.

AKIPS: "Always Keep IT Purely Simple"

For the non-technical audience:

AKIPS key points of difference:

1. Low cost annual subscription
2. Scales to any size network
3. Instant visibility with ↗ 'clickable' ↘ data history

AKIPS provides 100% visibility across any size organisation. From a single VM, AKIPS is the only scalable, cost effective solution that monitors over one million interfaces at one minute resolution, with IPv6, SNMPv3 encryption, Netflow, Syslog, wireless monitoring, and trap collection. www.akips.com
