

## PRESS RELEASE

*AKIPS Exhibiting at CeBIT Australia, 2 – 4 May 2016, Sydney Olympic Park*

**Sydney, New South Wales – February 29<sup>th</sup> 2016** – AKIPS, the leading scalable network monitoring solution, announced that it will be showcasing its software at CeBIT Australia.

Paul Koch, AKIPS CEO announced “As an Australian company, AKIPS decided to exhibit at CeBIT Australia. CeBIT is the largest, independent (vendor neutral), business technology solutions event in the Asia-Pacific region. CeBIT provides a great learning environment for customers to identify solutions across the business technology landscape that could benefit their business. AKIPS Network Monitoring Software is one such solution. The event is the flagship IT event for both government and business enterprise professionals.

AKIPS will be showcasing our Network Monitoring Software within the 'Startup Zone'. Having established AKIPS in 2014, CeBIT will be our inaugural participation at an expo in our local Australian marketplace. AKIPS started with the goal of delivering the most scalable and fully featured network monitoring system, for a commodity price. We have delivered upon that goal and now AKIPS Software benefits customers across the globe.”

“If your business relies upon your IT network to allow it to operate, make sales and interact with your customers, you need AKIPS to monitor it to allow pro-active management of any issues.” Nick Frampton, CTO.

AKIPS customers obtain 100% visibility with real-time interactive reports, dashboards, graphs and tables to be able to target network issues. Network engineers are the power users of the software, yet CIOs and non-technical staff can make use of its simple, intuitive user interface to navigate their network performance data.

AKIPS Software, operated from a VM installation, has the scalability to monitor your entire wired and wireless network, with multi vendor support, and up to 3 years of history at 1 minute data resolution.

Monitored technologies include: Netflow, Syslog, NBAR, IPSLA, HSRP, TCAM, VRF, Voice Calls, Routers, Switches, Servers, Firewalls, Load Balancers, WAN Optimisers, Wireless Controllers, UPS, IPAM, Environment Sensors (humidity, temperature, power), VPN/SSL, VLANs, IPv6, SNMPv3, SNMP Traps, Interfaces (usage, errors and congestion), and extensive multi-vendor support for over 800 MIB objects. Also included is extensive alerting functionality (Syslog, Traps, Thresholds and Status alerts), and high speed packet replication for Netflow, Syslog, and Traps.
