Network Monitor

PRESS RELEASE

AKIPS develops the most scalable and featured network monitoring software, delivered at a commodity price.

Brisbane, Australia – October 2014 – H A P P Y H A L L O W E E N

AKIPS Network Monitor is 6 months old! Well at least that's how long the software has been released.

AKIPS has spent years of man hours and millions of dollars on the development of the software and since initial release have added some 1000 new features. On average we had added an additional MIB object each day, have delivered on many of the user requests for additional functionality and have advanced the deployment of monitoring for wireless devices. There is more to come and we look forward to partnering with our customers to deliver on our vision to be the Number 2 Network Monitoring Company in the World. { Every other vendor claims to be Number 1, so we will be happy to be Number 2 }.

AKIPS true vision is in line with what we are in progress of delivering. *The world's most scalable and featured network monitoring software, delivered at a commodity price!*

Our roadmap includes full coverage of all major vendors equipment inclusive of monitoring wireless devices. Alerting has already been introduced and will be tweaked to deliver live reporting for our customers. This includes instant alerts with the ability to set threshold levels for prioritised alerting. We operate in a Virtual Machine and have the lowest deployment cost of any network monitoring software vendor as you don't need to pay for a trial and don't need to acquire any hardware. AKIPS software practically installs and upgrades itself and discovers your network devices automatically. AKIPS easy navigable Graphical User Interface allows you to click through the network performance data to deliver transparent results immediately.

Customers are extremely satisfied with the ease of deployment and software upgrades. The technology roadmap of features, inclusive of wireless monitoring, will fast become reality. World class businesses, training institutions, and now schools alike, can benefit from the transparency and accountability AKIPS Network Monitor delivers for their customer.
