

PRESS RELEASE

AKIPS develops the most scalable and featured network monitoring software, delivered at a commodity price.

Las Vegas, Nevada – April 2015 – AKIPS Network Monitor – Exhibiting at Interop. Stand 2434 (incorporating Information Week & Cloud Connect @Interop)

AKIPS is pleased to be exhibiting at Interop 2015.

Interop Las Vegas is the leading independent technology conference and expo dedicated to providing technology professionals unbiased information on technologies to transform today's enterprise. IT Pros come to Interop to see the future of technology and the possibilities of what it means to be in IT.

AKIPS Network Monitoring Software provides 100% visibility across any size organisation. From a single VM, AKIPS is the only scalable, cost-effective solution that monitors over one million interfaces at one minute resolution, with IPv6, SNMPv3 encryption, Netflow, syslog, wireless monitoring, and trap collection. Designed and engineered in Australia.

AKIPS first attendance at Interop will coincide with the first birthday of the company, headquartered in Queensland, Australia. All the founders of the company will be present on Stand 2434, so make sure you come on by and say hello (or if you're game...try your luck with a talking a little Aussie Slang and the fellas will have a laugh).

Paul Koch, CEO, says "AKIPS chose Interop as our first exhibition due to the exposure the show has to high calibre personnel at both the CTO and CIO level. Interop, combined with Information Week and Cloud Connect, is the perfect venue to promote AKIPS Network Monitor".

Quick facts about AKIPS Network Monitor:

- 100% visibility of your network
- IPv6 & SNMPv3 fully supported
- Vendor targeted technologies
- Installs in 10 minutes
- Installs in a Virtual Machine
- 1 million interfaces per minute
- 3 years history at 1 minute resolution
- 1 million flows per second
